- :: Reporting and Statistics about Measures of performances of company's processes

ENTERPRISE RESOURCE PLANNING SOLUTION FOR SMALL AND MEDIUM ENTERPRISES

NextERP was born from strong and direct 15 years long experience in projects, cost centers and business processes' management.

NextERP has been developed according to requirements and guidelines for the company's quality systems as by ISO 9001:2008 and CMMI SW lev. 3 (SW Capability Maturity Model Integration - level 3).

NextERP information system can be easily customised and/or integrated with existing systems (e.g. attendance and/or access control systems).

It relies on ASP and .NET web technologies and on MS SQL Server database; it provides both local (intranet) and remote (internet) access to its services.

The provided functions are organized in small packages in order to give different and proper access rights taking into account the business area, the role and the users' profile.

Accesses are secured by Company's domain authentication mechanisms, while for sensitive areas an advanced authentication equipment is used.
