

# SuSyAR

*Surveillance System Augmented Reality*

## FUNCTIONALITIES

- :: Presentation of visual field observable from tower in Multi/WideScreen vision
- :: Augmented Reality Integration with other systems/subsystems contents
- :: Gesture's advanced analysis through a Leap Motion Device
- :: Camera Management
- :: Multi Field Camera
- :: Advanced Selection View
- :: Event generation from camera motion/ detection
- :: Target Path View
- :: Scenario Recording & Playback
- :: Camera tracking
- :: Advanced Scene Display Management
- :: Multilingual
- :: Alarm generation towards other systems

## INTEGRATED SOLUTION FOR AUGMENTED REALITY VIDEO SURVEILLANCE SYSTEMS

SuSyAR is an innovative system for geolocated surveillance integrated with Augmented Reality capabilities.

SuSyAR is oriented to all applications for surveillance/monitoring and it is easy to be integrated as a subsystem in more complex Homeland Security/Protection solutions. Some SuSyAR use cases are borders surveillance and/or security support during big events management.

SuSyAR is a scalable system and is available in an Entry Standard or in an Enterprise version.

SuSyAR plus, in respect to other video surveillance systems, is the capability to enhance video images with augmented reality contents allowing a better monitoring and a real time analysis of the areas under video cameras control.

SuSyAR enhancement capabilities work on both visible and IR spectrum for night vision and/or low visibility conditions (e.g. fog).
